**APRIL FOOLS'!**

**Don't be Fooled on April 1<sup>st</sup> and Beyond . . .**

1. Do a double-check when getting emails from institutions to ensure that website links and email attachments are from legitimate sources.
2. Lock your device screen when not in use in order to prevent a nearby prankster from accessing your device for either whimsical or nefarious means.
3. Hackers love to impersonate Free WiFi access points so show them you are not to be fooled by always verifying the login information at the checkout counter.
4. Prevent rosy cheeks of shame by always downloading apps from reputable providers like Google Play and the Apple Store.
5. Outsmart the enemy by always using 2-step verification for account login whenever possible.

**SECURITY IS EVERYONE'S  
RESPONSIBILITY!**
