

WAYS TO PROTECT YOUR DATA

BACK IT UP

1

Regardless of how careful you are, accidents and incidents can cause the corruption of any system. So back up your data frequently.

SHRED UNNEEDED PAPERWORK

2

Personal data (such as financial and medication information) continue to be provided on paper. When you no longer need it, be sure to shred it.

KEEP SOFTWARE UP-TO-DATE

3

Most updates include remediation for the latest security vulnerabilities. By keeping your system and software current, your data is better protected.

USE HTTPS

4

When transactions occur online, it is always better to have them occur across a secure and encrypted transmission.

TREAT IT LIKE MONEY

5

In the eyes of hackers, your data is the same as money. Email addresses sell for \$2.50 and complete medical records selling for \$1,000.

SECURITY IS EVERYONE'S RESPONSIBILITY!
